converting at least a portion of the source placeable element into a target placeable element.

17. (Twice Amended) A computer driven language processing system for processing source information comprising:

a parser;

an element identifier, connected to an output of said parser;

a type designator, connected to an output of said element identifier; and

a placeable converter.

18. (Amended) A computer driven language processing system for processing source information comprising:

a parser for parsing source information into elements;

an element identifier identifying placeable elements by a predetermined criteria;

a type designator for designating said placeable elements by type; and

a placeable converter.

23. (Amended) A method for processing source information according to claim 1, wherein the step of converting mathematical calculations [is] are automatic.

Please add claim 24:

-- 24. A method for processing source information comprising the steps of:

parsing input source information into elements;

identifying a source placeable element by predetermined criteria; and

calculating at least a portion of the source placeable element into a target placeable element.
